

# An HDRUK And MHRA Dataset: Assessing The Use Of Sodium Valproate In Acute Care

Data range for infographic: 01.01.2018-30.06.2024
Other extended time periods are available on request

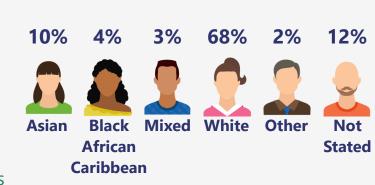

A highly granular dataset of 77,223 acute admissions with epilepsy and bipolar disorder to study the use of Sodium Valproate, including demography, comorbidities, symptoms, serial physiology and investigations, medications (name, dose, route), outcomes.

# Demographic

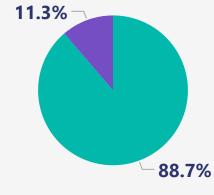

The dataset includes:

- Young adults and children **20%** (ages 0-24)
- Adults **58%** (ages 25-64)
- Older adults **22**% (ages 65+)

Based on the index of multiple deprivation map, **54%** of the population are from most deprived areas and **6%** of patients are from least deprived areas.

#### **Epilepsy presentations**

● Simple seizure ● Status epilepticus

#### **Cohort**

- 47,876 spells presented with Mania or referred to psychiatry
- 23,844 spells diagnosed with Epilepsy
- **8,499** spells prescribed Valproate
- 6,195 spells with medical history of Valproate

# **2M**

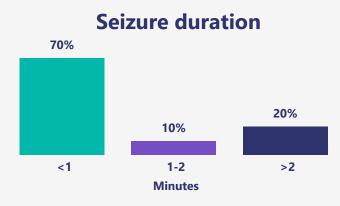

Prescriptions recorded

#### **Medications**

- **77K** Diazepam prescriptions
- **76K** Midazolam prescriptions
- 74K Lorazepam prescriptions

Other prescriptions are available.

#### Seizure

The median duration for a seizure is 1 minute and the average is duration is 3.5 minutes.

Other seizure details are available.

### **Inpatient care**

- 77,223 Hospitalised spells; containing 42,571 unique patients admitted to hospital
- **578K** days worth of hospital data with an average in-hospital length of stay of 7 days
- In-hospital mortality rate of 1.7% and 99% of patients surviving 30 days after discharge
  The median National Early Warning Score is 1 and the median Clinical Frailty Scale is 5

## **Intensive care**

Over **3K** ICU admissions with an average length of stay of 13 days.

Other ICU data are available.

## **Outpatient admissions**

**93**K

Neurology clinic appointments

Epilepsy clinic

appointments
