

# **Developing Tools To Prevent Avoidable Admissions For Patients Aged 65 And Older**

#### Data range for infographic: 01.10.2021-30.09.2022 Other extended time periods are available on request

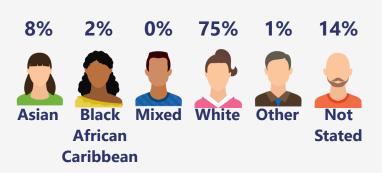

A highly granular dataset of 130,753 Emergency Department presentations for patients aged 65+, curated by PIONEER working with HDR-UK. Includes demographics, serial physiology, acuity, investigations, treatments, and outcomes to study avoidable admissions.

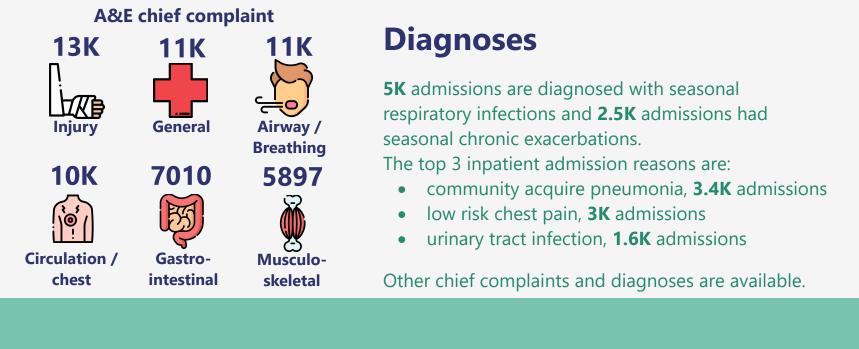

## Demographic

The dataset includes patients aged 65+:

- Female **54%**
- Male **46%**

Based on the index of multiple deprivation map, **31%** of the population are from most deprived areas and **14%** of patients are from least deprived areas.

#### **A&E investigations**

Over 412K investigations recorded in A&E with the average number of investigations done being 5. The main urgent investigation is an X-ray.

#### A&E treatment

Over **174K** treatments recorded in A&E with the average number of treatments done being 2. The main urgent treatment is Cardiac monitoring.

### **Inpatient care**

- 130,753 Hospitalised admissions; containing 49,229 unique patients admitted to hospital
- **445K** days worth of hospital data with an average in-hospital length of stay of 8 days
- In-hospital mortality rate of 4% and 3% of admissions discharged to a care home
- The average number of comorbidities the patient is diagnosed with is 9 with a median of 8

## **Inpatient procedures**

More than **82K** in-patient procedure recorded with the average number of procedure being 1.6. The main procedure recorded is a CT scan of the

## Discharge

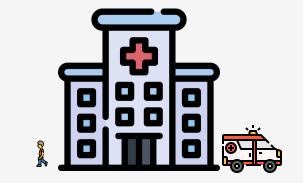

**1%** of A&E attendances are discharged to urgent care and **92%** of A&E attendances are discharged to residence. 89% of inpatient admissions are

#### Other inpatient procedures are available.

#### discharged to residence.
